Manufacturer

Details

A unique, simple design with emphasis on durability, reliability and good functionality under any circumstances.

The main parts, the carrier and the locking mechanism are made from high quality steel and have been subjected to heat treatments for maximum resistance to strain and wear even under poor lubrication conditions. The air piston holder plate is made of a special alloy and the air pistons-cylinders are made of brass and aluminum which makes them resistant to the wear and corrosion to the moisture created by the use of compressed air.

The differential gears (side gears and pinions) used in this locker are that of Mitsubishi factory differentials. This means that the carrier is delivered empty and all internal components by the original differential must be placed into it together with two additional pinions.

Please contact for more details or the part code.

An electromagnetic air valve, air connection fitting, air hose and an electric switch with LED indication are supplied with the locker.

It is necessary to purchase the fitting air compressor in order to be able to operate this product.

One air compressor is suitable for the use in two lockers.
