Details

Unique, simple design with emphasis on durability and reliable operation under any circumstances.

The main parts, the carrier and the locking mechanism are made from first quality steels and are subjected to heat treatments for maximum resistance to strain and wear even under poor lubrication conditions. The air piston holder plate is made of a special alloy and air pistons-cylinders are made of brass and aluminum for unlimited resistance to wear and corrosion caused by moisture due to the use of compressed air.

The differential gears used in this locker are that of factory differential. That is, the carrier is delivered empty and all internal components by the original differential must be placed in it.

An electromagnetic air valve, air connection fitting, air hose and an electric switch with LED indication are supplied together with the locker.

It is necessary to purchase the relevant compressor in order to operate it. One air compressor, is suitable for use in two lockers.
